

ABSTRACT OF THE DISCLOSURE

An RPG Toy playing process includes the step of obtaining a story background from a book or an interactive CD, the step of using a game card as a clue or data to enter game mode and complete all game objectives when understood the story background, and the step of logging in a web site or a specific software to obtain the ending of the story or a prize. The recognition of the clue or data is done by means of inserting a punched card into a main unit. The main unit uses contact copper leaves, photoelectric sensor, barcode reader, IC chip reader, or voice recognized IC to achieve recognition action.
